REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: None of the prior art taught or suggested that one skilled in the art would have provided the specific layered structure which included the fabric strip and the additional fibrous layer formed from the blend of thermoplastic fibers and reinforcing fibers on a conveyor in the manner claimed. The reference to Francis (which taught the specific layered structure) is not forming a void free product as noted by applicant and there is no reason to look to the specific fiber arrangements therein in the operation of O'Connor. While applicant's arguments relating to the continuous processing in O'Connor have NOT been found to be persuasive, the references to Baumann or Schermutzki do not relate to thermoplastic fiber reinforced composites of the same kind as claimed, namely ones formed from the specified layered arrangement which included the use of thermoplastic fibers which formed the matrix for the finished composite assembly. It should additionally be noted that while it would have been within the purview of the ordinary artisan to form a void free product, the references do not establish that the specific final product would have been envisioned with the layering as specified. Note that the apparatus as claimed additionally is patentable over the prior art as none of the prior art provided the specified apparatus wherein one was capable of supplying with the specified means the strip and fabric and the additional layers specified.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
